Care and Cleaning Guide**

We recommend cleaning at least once a week to extend the lifespan of the upholstery, which will prevent dirt and contamination buildup and permanent staining. In the event of a spill, wipe off any excess right away with a dry white cloth or fabric, but careful not to spread to remaining surface.

Clean the whole surface in a circular motion using liquid hand soap (pH neutral) and water (1 part soap to 9 parts water). Check the Approved Cleaners guide for recommended cleaning products. Wipe with a clean damp cloth to get rid of any excess soap. Repeat as needed and then let dry.

If there is any buildup that cannot be removed with soapy water, a mixture of 1 part isopropyl alcohol to 9 parts water can be used as a last resort. (Remember, using alcohol on a regular basis can affect the properties of the product).

Once a month, you can use a soft-bristle brush for a deeper cleaning. Remember, light colors need more care, more often.

Note: The cleaning products recommended were used in a laboratory setting. Spradling Group® has no relationship with the manufacturers of those cleaning products.

For Color Transfer

Certain clothing and accessory dyes (such as those used on denim jeans) may migrate to lighter colors. This phenomenon is increased by humidity and temperature and is irreversible. Please check compatibility when using this product in combination with painted or varnished surfaces.

Disinfectants

In addition to cleaning, healthcare facilities maintain disinfecting regimens to reduce the spread of infections. There is a wide variety of available biocides that include bleaches, peroxides and quaternary ammonium products, among others. They should always be used at the recommended dilution, never in concentrated form. To prolong the life of coated fabrics, the disinfectants should be rinsed off after each use. It should be noted that misuse of disinfectants is the major source of surface deterioration. Spradling International, Inc.® continually evaluates cleaners/disinfectants, and a list of those tested can be found on our website.

Abrasion test results exceeding ACT Performance Guidelines are not an indicator of product lifespan. Multiple factors affect fabric durability and appearance retention.

Information contained herein is subject to change without notice. The most current and complete product information can be found on our website.

Some products may contain chemicals, identified by the State of California as a cause of cancer, birth defects or other reproductive harm at certain exposure levels. Under the California known as "Prop 65", certain warnings to consumers in California are required where such products are sold. The presence of such chemicals in coated fabric products, even at extremely low concentrations, can lead to disputes over Prop 65 warning obligations that are very difficult to resolve. If your company intends to introduce Spradling vinyl products into commerce in California, Spradling recommends that you take steps to confirm whether the warning requirements of California's "Prop 65" are applicable to the products in question and whether your company is complying with those warning requirements for the chemicals contained within these products.
