

EXAM ROOM SUPPLIES

STAINLESS STEEL DRY HEAT STERILIZER

The improved technique for dry heat sterilization in the shortest possible time. Sterilizes instruments, needles, syringes, dressings at 320 – 360° F (160 – 180° C). Sharp instruments remain sharp; no steam or moisture to corrode the finest edge. Exclusive internal-wall tubular heating system is burn-out proof. 115V AC. UL/CSA listed.

The Best Method for Sharp Instruments

Dry Heat Sterilizer kills bacteria without moisture and will not dull sharp instruments. Plus, they can be used to dry wet packs or as a back-up sterilizer in your practice - the perfect complement to an autoclave.

Maintenance-Free

Unlike wet heat methods, Dry Heat Sterilizers require no routine cleaning.

Safe and Simple to Operate

Dry heat sterilization works without pressure, steam, or chemicals, which increases safety.

Convenient

Utility trays can be sterilized with lids on and stored without contamination. Also, they have automatic timers with heat "hold" capability for continuous use in a busy practice.

High-Quality

Stainless steel construction means no rust.
